

Things I remember most
in 2020/2021 school
year

Coronavirus COVID-19

I studied online from March 2020 to May 2020. The study was more difficult than usually. The website that we used was sometimes overloaded and did not work. It was more difficult for me to learn school material. Also, all people were wearing masks and used an antiseptic. Many shops were closed. Pick-up points were opened. Most people used home delivery of goods and medicines. Also, food delivery services did not use cash payments. The stuff was constantly getting body temperature.

Vaccine

In Russia, the first limited registration was received on August 11, 2020 by the drug Gam-COVID-Vac ("Sputnik V"), created at the Center Gamalei. EpiVacCorona, the second Russian vaccine developed by the Novosibirsk Center Vector, received registration on October 13. Mass vaccination against COVID-19 for everyone in the regions of Russia was begun on January 18, 2021.

Vaccine Gam-COVID-VAC

Example of vaccination

This school year was very hard for everybody. Many people died after testing positive. When we were having a period of distant learning my classmates and me received milk at the end of the month.

In spite of that I have been sick several times this year.

Cryptocurrency

The background features a series of overlapping, semi-transparent geometric shapes in shades of orange and yellow, primarily concentrated on the right side of the frame. The shapes include triangles and polygons, creating a dynamic, layered effect. A thin, light gray line runs diagonally across the lower right portion of the image, intersecting the geometric shapes.

- ▶ In autumn 2020 I came to know about cryptocurrency. Bitcoin is one of the types of cryptocurrency. This was extremely interesting.

There is another cryptocurrency and it is dogecoin. You can see the meme of the doge. That currency is actively promoted by Ilon Mask. Because of this bitcoin is actively falling.

In the autumn of 2020 to the present day, there has been a shortage of computer video cards in the world. This happened because of the cryptocurrency miners. The most popular cryptocurrency in the world is bitcoin.

Thank you for attention!
